

# ***“Joint Issues In Hemophilia Carriers: Symptomatic AND Non-Symptomatic”***

**MAY 28**

**6:30 PM**

**Longview Farm  
13525 Clayton Rd  
Town & Country**

**An accurate dinner count is required. Please RSVP to Bridget at: 314-482-5973 or [info@gatewayhemophilia.org](mailto:info@gatewayhemophilia.org)**

Dr. Sidonio will give an update on the diagnosis and management of hemophilia carriers. He will discuss the preliminary findings from his ongoing study on the possibility of joint changes and reduction in joint range of motion as well as clinical and joint range of motion data from the Universal Data Collection project. Dr. Sidonio has an ongoing investigator-initiated study in adult and adolescent female Hemophilia A carriers with the objective to determine whether carriers have increased bleeding tendency.

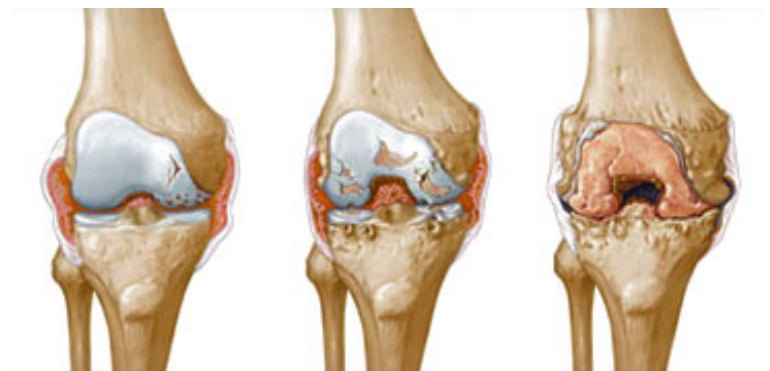

Presented By:

**Dr. Robert Sidonio**

Dr. Sidonio is an Asst. Professor of Pediatrics, Pediatric Hematologist/Oncologist at Vanderbilt University. Dr. Sidonio's primary clinical and research focus is in Women's Bleeding Disorders.

**SPONSORED BY:**

**CSL BEHRING**

Swelling of tissues  
in the knee may  
become permanent.

Over time, this can  
lead to wearing away  
of the bone.

Permanent damage  
results in a  
destroyed joint.

**THIS COULD BE  
YOU!**
